## WORK EXPERIENCE

### Amazon Web Services (AWS) QuickSight – Data visualization platform for business intelligence July 2020 – June 2023

Software Development Engineer II, Software Development Engineer I – Website Performance team

- Led design and implementation to improve full-stack performance and minimize query latency (Java, ReactJS)
  - Created query scheduling service using WebSocket protocol to decrease p90 query latency from 12s to 8s
  - Implemented multi-threading to resolve query dependencies in parallel and reduce round-trip time by 40%
- Designed and implemented A/B testing framework to run high-volume performance experiments (2TB/month)
  - Served as project lead to two junior engineers, led engineering design meetings, delegated implementation deliverables, and successfully launched project with security review for Preview and GA
  - Built CDK infrastructure to conduct load tests with configurable feature flag treatments, allowing engineers across various teams to monitor and alarm on latency regressions during independent feature rollouts
  - Metrics streamed in Kinesis, processed via Lambda, stored in S3, monitored and alarmed in CloudWatch
- Responsible for feature design and development, unit and integration testing, code reviews, and customer demos
  - Additionally mentored two summer interns who successfully received and accepted full-time return offers

### GlaxoSmithKline (GSK)

May 2019 – Aug 2019

Software Engineering Intern – UI Platform team

- Contributed to a reusable web component design system built on top of Material UI for GSK internal sites
  - Developed chatbot UI component under mentor guidance and housed components library in Storybook

## STARTUP EXPERIENCE

### BetApp.io – Social media platform for users to form goal-oriented communities and quantify progress July 2023 – May 2024

Founding Engineer

- Fully responsible for product and engineering design and implementation of full-stack MVP features, including user communities, real-time progress visualizations, notifications, user account settings, authentication and authorization
  - Implemented separate CI/CD pipelines using native AWS for backend service (Java Spring) and frontend (ReactJS) to decouple rollouts, allowing for consistent release cycles and quick iteration on user feedback
- 100 active users within 1 month of Preview launch using grassroots marketing

## LANGUAGES | TECHNOLOGIES | FRAMEWORKS | EXPERIENCED FIELDS

Java | Python | C++ | JavaScript (ES6) | TypeScript | HTML | CSS/SASS | Swift | MATLAB  
Git | SQL | NoSQL | Node.js | Linux | Docker | AWS (Lambda, IAM, CloudWatch, EC2, DynamoDB, S3, Kinesis, CDK)  
Spring | Maven | Apache Tomcat | ReactJS | Redux | Material UI | Flux | Django | Flask | TensorFlow | Spark | Hadoop  
Machine Learning | Cloud Computing | Distributed Systems | Database Systems | Microservices | Computer Security

## EDUCATION

### Washington University in St. Louis, St. Louis, MO Aug 2015 – May 2020

Master of Science in Computer Science | Concentration in Machine Learning and Data Mining

May 2020

Bachelor of Science in Biomedical Engineering | Minor in Computer Science

May 2019

GPA: 3.9/4.0 | Graduated Cum Laude

Conducted research under Dr. Vorobeychik to develop adversarial text algorithms in the field of AI and NLP

2019 – 2020

One of three students awarded the Dean's Select Fellowship, a full ride for WashU Engineering program

Oct 2018

## PROJECTS

### AvalonApp.io, MERN stack June 2020

- An online web version of the popular social deduction board game with additional features such as ELO rating, public game lobbies, in-game statistics, and an increased limit of 12 players per game — 150 users and counting

### DBMS, Java

Dec 2019

- RDBMS system with relational operation parsing, query optimization, multi-level indexing, and deadlock resolution

### KeyWatch, Python, JavaScript

Aug 2019

- Web app to monitor Parkinson's symptoms using typing patterns (won breakthrough award at MIT Hackathon)
